DETAILED ACTION

Election/Restrictions

An attempt for provisional restriction requirement was made on Tuesday, February 7, 2006 with Applicant's Attorney, Joseph Curtin. A written request was requested. See interview summary attached.

Restrictions to one of the following inventions is required under 35 USC 121:

- I. Claims 1-25 and 45-65, drawn to increasing failure tolerance of a storage system with minimum Hamming distance, classified in class 714, subclass 777.
- II. Claims 26-44 and 66-87, drawn to a method for rebuilding an array following an array failure, classified in class 714, subclass 799.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, increasing failure tolerance of a storage system with minimum Hamming distance and Group II, a method for rebuilding an array following an array failure are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claims of Group II do not require the limitations of increasing failure tolerance of a storage system with minimum Hamming distance. The subcombination has separate utility such as in a single networked environment.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
